

Name: VamsiKrishna Adusumalli **Submission Date:** 6-09-2026

GitHub: https://github.com/vamsi462/Git_and_GitHub_Vamsikrishna

Task 1: I cloned the GitHub repository to local using an SSH connection and added SSH key before cloning and then I have created a new branch named vamsikrishna using git branch and then checked to new created branch using git checkout and added the the Flask-MongoDB project files , committed the changes, and merged the branch back into main since it is a empty repo so I have created the main branch and then merged .

```
DELL@DESKTOP-09JL5MJ MINGW64 /d
$ git clone git@github.com:vamsi462/Git_and_GitHub_Vamsikrishna.git

Author: vamsi462 <vamsikrishnaadusumalli999@gmail.com>
Date: Sun Sep 6 00:42:42 2026 +0530

    Added my Flask project files

DELL@DESKTOP-09JL5MJ MINGW64 /d/Git_and_GitHub_Vamsikrishna (vamsikrishna)
$ git branch main

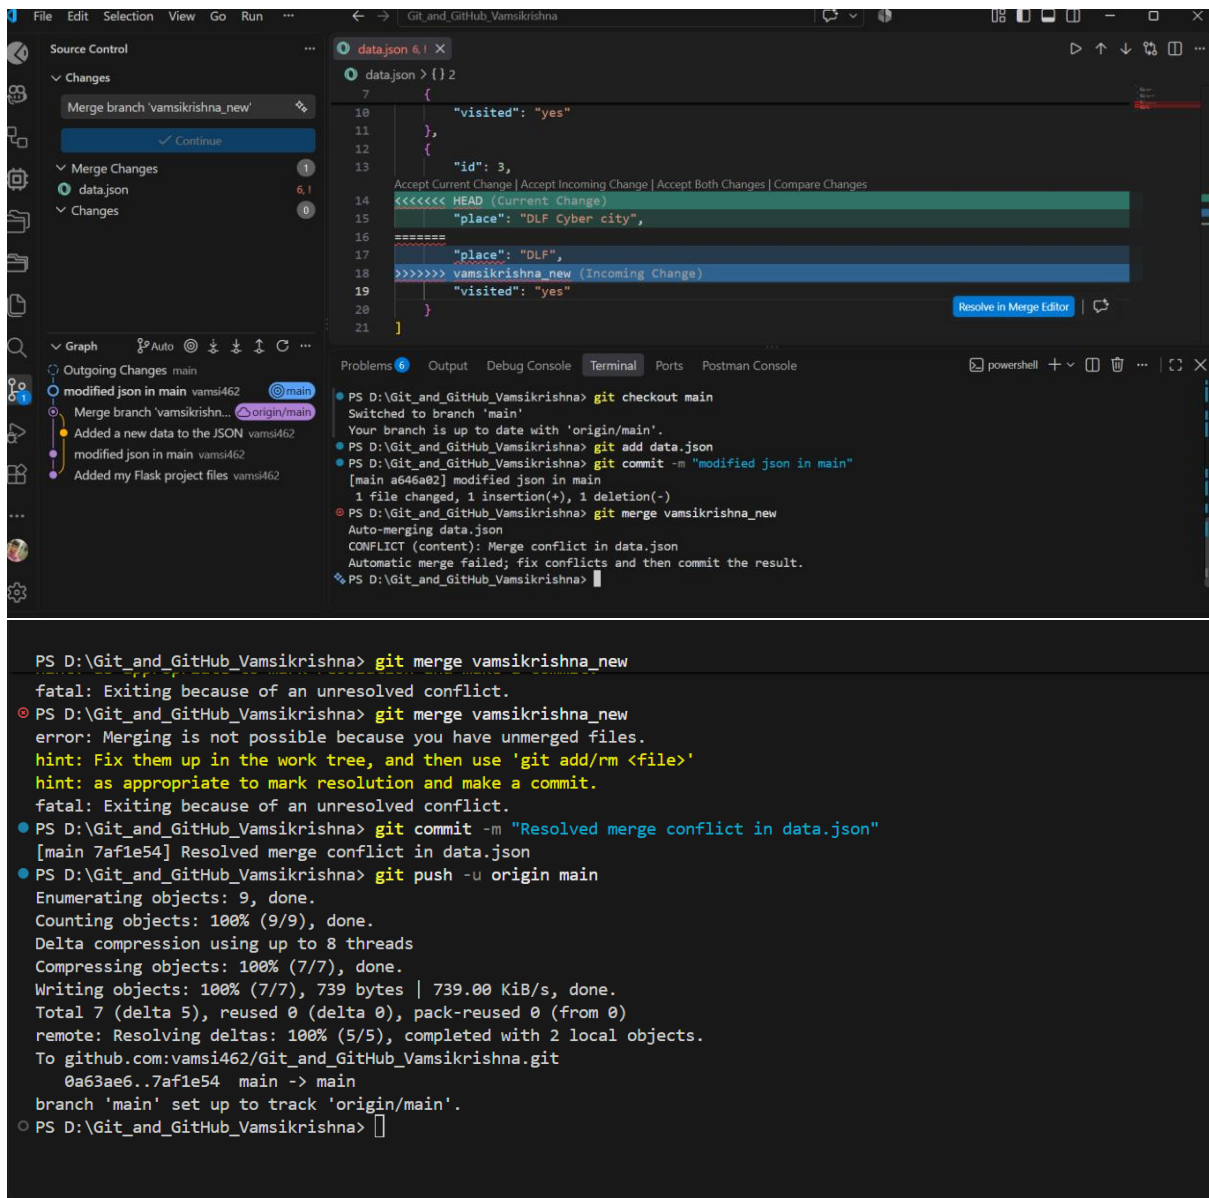

DELL@DESKTOP-09JL5MJ MINGW64 /d/Git_and_GitHub_Vamsikrishna (vamsikrishna)
$ git checkout main
Switched to branch 'main'

DELL@DESKTOP-09JL5MJ MINGW64 /d/Git_and_GitHub_Vamsikrishna (main)
$ git merge vamsikrishna
Already up to date.

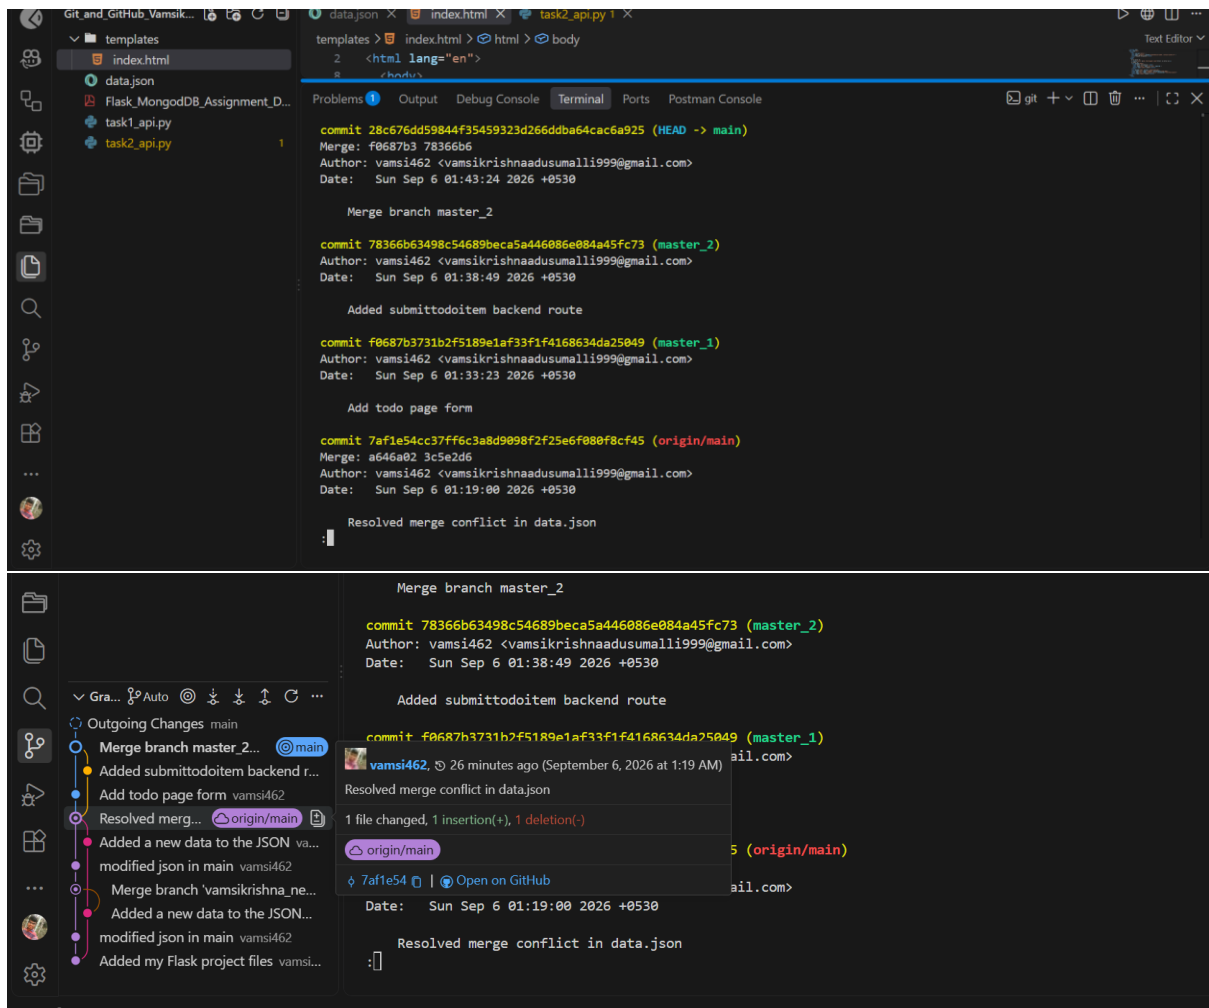

DELL@DESKTOP-09JL5MJ MINGW64 /d/Git_and_GitHub_Vamsikrishna (main)

```

Task2: I have created a branch named and checked out at the same time as vamsikrishna_new and then edited the data.json file added those changes and committed those changes. Next, I went back to the main branch and changed the safe file, When I tried to merge them, Git thrown a conflict error. I opened up the file in VS Code, accepted the changes from the new branch, saved it, and then ran my commit and push commands to update the repo, in this way I have learned how to resolve conflicts.

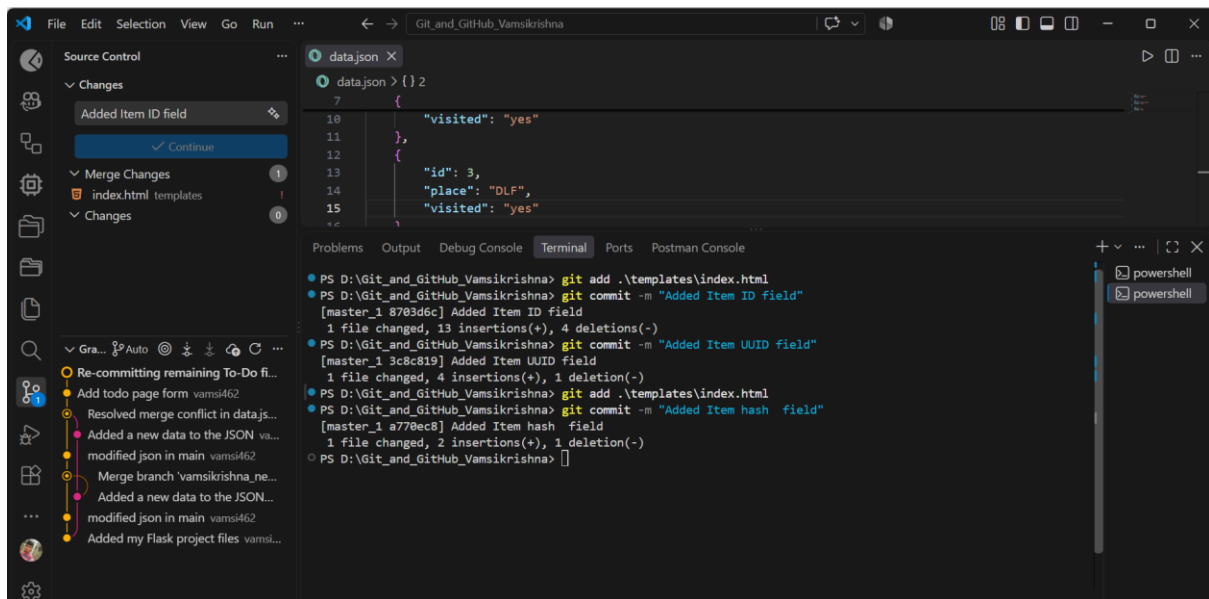

Task3: I split the work into two separate feature branches. On master_1 branch, I opened the HTML template in VS Code and added the form fields for the item name and description. On the master_2 branch, I opened Python backend script and coded the `/submittoitem` route to handle incoming POST data. Finally, I switched back to the main branch and merged both feature branches in sequentially so everything came together.

Task4: Practiced making clean, sequential commits on a feature branch (master_1) by adding individual form fields one by one rather than all at once.

Learned how to use git reset --soft to roll back the commit history while keeping file changes safely staged, allowing multiple commits to be combined into a single polished update.

```

error: there was a problem with the editor 'vim'
Not committing merge; use 'git commit' to complete the merge.
